

Commercial offer for the supply of rubber mats Animat (Canada) for cowsheds

Mats with puzzle connection

Rubber floor covering is made in the form of rectangular mats with a puzzle connection alongside the perimeter. The upper layer has anti-slip embossment, which prevents animals from slipping. Besides, it boasts sufficient dumping capacity for hooves protection. The bottom layer in its turn has grooves for draining of liquids.

The mat is made of high-quality rubber, capable of withstanding technological transport, as well as scraper manure removal systems. When laying on slatted floor, it is possible to cut holes, so that floor and covering gaps match 100%. This covering is resistible to all kinds of technical liquids, used in cowsheds. The design of the rubber mats prevents dirt contamination of the lower part, even during the installation.

Areas of use:

- waiting areas;
- milking parlors;
- passage corridors
- feed and manure channels;
- stables and other agricultural premises;
- stalls.

Product characteristics:

Mats with puzzle connection

- lengths 1778mm;
- width 1157mm;
- thickness 19mm;
- floor space 2,06m²;
- upper side: anti-slip embossment;
- bottom side: micro grooves for moisture drainage;
- base of the material: 100% recycled rubber;
