

Commercial offer for the supply of mattresses for stalls in cowsheds (bed size 1,8m x 1,2m)

The mattress for stalls represents two or three layer floor covering which ensures comfortable and hygienic housing of cows. It is designed to rationalize work in a stall in order to reduce the cost for daily renewal of the bed of straw etc.

Besides, this product allows to:

- Improve the hygienic conditions on the farm, as well as resting conditions of the animals;
- Reduce infectious diseases of cows;
- Increase their productivity .

Flooring has the following peculiarities:

- Convenience – it can be installed on any floor;
- Reduced maintenance and cleaning costs in comparison to conventional stalls, equipped with bedding materials, such as straw, sand etc.
- Improvement of microbiological environment in the stall ;
- Reduction of risk of injuries and abrasion, as mat surface is made of non-slipping and quick drying materials .
- A cleaner and more presentable stall .

The bottom layer – the base of the mattress with the thickness of 30-50 mm, which consists of latex or PU foam. In order to ensure tightness, the base is packed into polyethylene film of 300 microns. Country of origin - EU

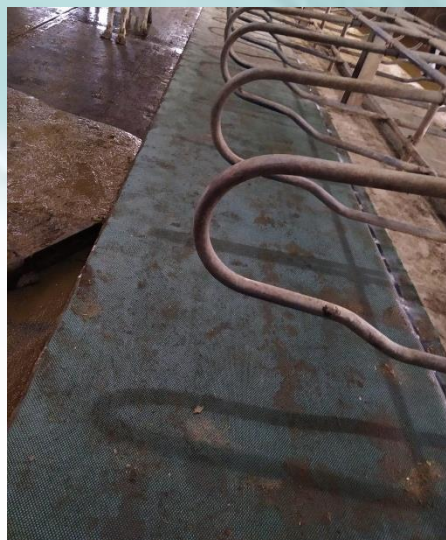

Upper layer is made of woven polypropylene (EU production), specially designed for use in box places. It is fixed with the help of clamping straps and screw plugs. Country of origin – EU. It preserves initial form and doesn't deform

Advantages of upper polypropylene coating:

- PP flooring is specially designed for beds
- It better holds spreadings, desiccants-dissinfectants, sawdust etc.
- This coating dries quicker than rubber
- Pp coating is supplied in rolls 250 m each, rubber – 50 m. There are no joints in the stall places, and as a result – no cumulation of germs
- micro-ventilation under a cow, which is impossible in case of rubber coating
- unlike rubber, this is the most gentle material for animal skin
- It is resistant to chemical treatment
