## Commercial offer for the supply of polycarbonate windows

A single-leaf window with polycarbonate filling represents a modular hinged structure on a window opening in a livestock farm. The transparent structure is based on celled polycarbonate (16 mm), which is resistant to ultraviolet. The modules (panels) are up to 2.1 m.

There are guides made of aluminum on the inside of the blinds, ensuring true vertical movement of the blinds and limiting the vibration of the blinds toward the outside, so that the sealing brush fits tightly.

Lead time: 30 working days from the moment of prepayment.
